

TECHNICAL BULLETIN

Custom Fit Radiators

Applies to: 91010, 91020, 91050, 91060-1, 91080, & 92010 Radiators.

Re: Automatic Transmission Cooler Fittings

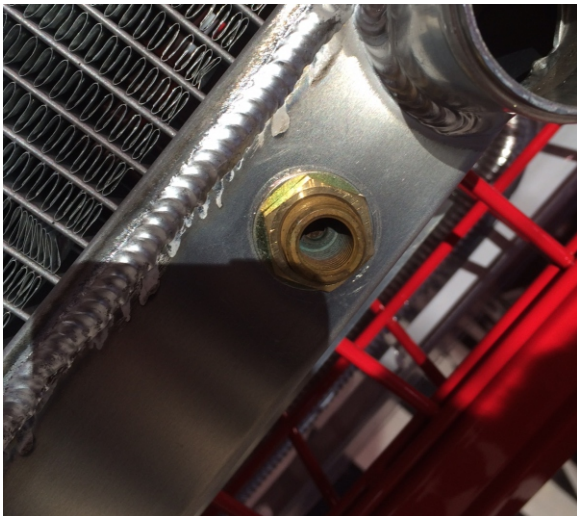

The factory installed coolers in the above noted radiators have an extra deep inverted flare fitting.

Only specific fittings will seat properly as standard fittings bottom out on the hex before seating on the flare.

Derale (#13024) and Hayden (#394) offer an extra long barbed fitting that will work. We have a specific fitting that will allow the use of a -6AN (9200506L). It is sold as a 2/pk.

Alternatively, the protruding threaded portion could be cut down (with a fine disc cut-off tool) to accommodate a standard fitting but we do not recommend it as damage to the cooler/radiator may result if not performed properly.

.640" Deep 1/2"x20 IF Cooler Fitting
(91010, 91020, 91050, 91060,
91080, & 92010)

9200506L

Part numbers NOT affected by this bulletin:
(91040-1, 91070-1 & 93020-1 include
1/4"NPT to 1/2"IF adapter shown below)
(91030, 91090 have 1/4"npt female)
(93000 has 1/8"npt female)
